SPRINT 1 RETROSPECTIVE

What went well:

      Our sprint 1 mainly focused on further understanding roles and primary UX/UI design. Each role and distributing them according to each members specifications.

What could be improved:

      There are numerous areas on our website that may require improvement, including as the desired Ul/UX still needs certain elements related to design, user experience, and user interface. Working together and improvising can also make our daily lives as a group considerably simpler and smoother.

What needs to be done:

      On our Sprint 1 there are still some missing that we want to be executed on our website. Specifically, finalizing the design of our Log In and Sign Up page.
